

- · Single / Dual Channel Arbitrary / Function Generators
- · 100MHz sine and 62.5MHz square waves
- Triangle, ramp, sinc, gaussian, exponential, noise, pulse generation with variable edge, and DC waveforms
- 16Vp-p into 50Ω, 32Vp-p into open circuit
- 16 Bit, 250MS/s, 512Kpoint arbitrary waveforms

MODELS WS8101/2

100MHz Single/Dual Channel Arbitrary Function Generators

- · Linear & logarithmic sweeps
- · Continuous, triggered, gate and burst
- · AM, FM, FSK, and PSK modulation
- · High resolution 3.8" LCD, color display
- · Ethernet, USB and GPIB interfaces
- · ArbConnection software for easy waveform creation

The Tabor Wave Standard 8101/2 is a Single / Dual Channel Arbitrary / Function Generator with a 100MHz bandwidth and the functionality of a function generator, arbitrary generator and pulse generator all in one easy to use high performance unit. It is a compact stand alone bench top unit that will satisfy all of the industry and education standard testing needs for years to come.

Standard Waveforms

The WS8101/2 has 11 built in functions for quick and easy wave generation. Front panel operations allows for easy selection of wave form and editing of all wave parameters. All of the standard waves can reach up to 31.25MHz with Sine and Square going as high as 100MHz and 62.5MHz respectively.

User Defined Waveforms

For more advanced users the WS8101/2 with its 16-bit vertical resolution offers a standard 512kb memory depth and a 250MS/s sample clock for designing waveforms. With the ability to control and edit the value of each and every point any wave is possible. The memory can be divided into segments for storing all of the user defined waveforms.

Modulated Waveforms

Agility and modulation capabilities open the door to diverse applications. In addition to the capability of generating any shape and style of waveform with the arbitrary waveform generation power, the products can also do standard modulation schemes such as FM, AM, FSK, sweep and PSK without sacrificing the power of the instrument control and output run modes.

Accuracy and Stability

As standard, the instrument is equipped with an internal frequency reference that has 1ppm accuracy and stability over a period of 1 year. An external frequency reference is provided on the rear panel for applications requiring greater accuracy or stability, supported by the instrument's up to 14 digits resolution from remote.

Easy to Use

Large and user-friendly 3.8" back-lit color LCD display facilitates browsing through menus, updating parameters and displaying detailed and critical information for your waveform output. Combined with numeric keypad, cursor position control and a dial, the front panel controls simplify the often complex operation of an arbitrary function generator.

Remote Control

Model WS8101/2 comes standard with a variety of interfaces: LAN, USB and GPIB allowing the user to freely select the interface best suited to his individual requirements. The included ArbConnection software is a powerful editorial tool for designing waveforms and provides the user with full control of instrument functions, modes and features.

Multiple Environments to Write Your Code

Model WS8101/2 comes with a complete set of drivers, allowing you to write your application in various environments such as: Labview, CVI, C++, VB and MATLAB. You may also link the supplied dll to other Windows based API's or, use low level SCPI commands (Standard Commands for Programmable Instruments) to program the instrument, regardless if your application is written for Windows, Linux or Macintosh operating systems.

Automated External Self-Calibration

Leading-edge technology is implemented to allow calibration from any interface, USB, GPIB or LAN and calibration factors are stored in a flash memory thus eliminating the need to open instrument covers.

NOTES.	npedance
NUTES:	
 All pulse parame may be freely pro 	eters, except rise and fall times, ogrammed within the selected

- 1 pulse period provided that the ratio between the period and the smallest incremental unit does not exceed the ratio of 512,000 to 1, hence the specifications above do not show maximum limit as each must be computed from the above relationship.
- 2. Rise and fall times, may be freely programmed provided that the ratio between the rise/fall time and the smallest incremental unit does not exceed the ratio of 100,000 to 1.
- 3. The sum of all pulse parameters must not exceed the pulse period setting.
