Semiconductor Curve tracer

CS-10000 Series
10kV~15kV ~8,000A

CS-5000 Series
5kV ~1,500A

CS-3000 Series
3kV ~1,000A

**Multipurpose even fits leakage current, and high current.
Auto measurement Supported!**

The best solution to property measurement of semiconductors such as IGBTs,
MOSFETs, TRANSISTORS and DIODEs from small to large capacities.

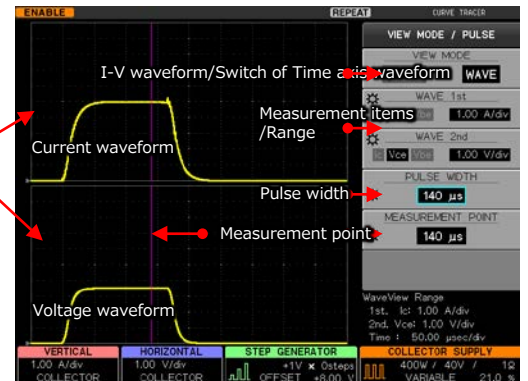

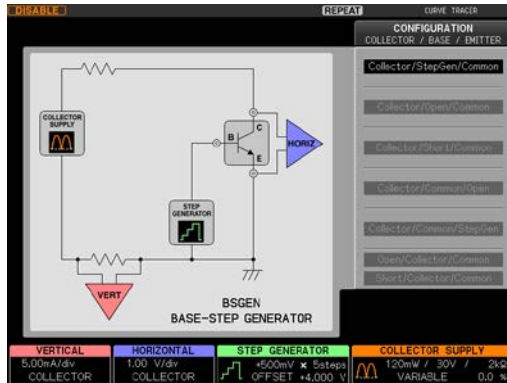

Advanced functions for your ease of use

■ The setting result is displayed in the setup display area under **CONFIGURATION** key sets. A proper connection is selected for device measurements.

■ The applied voltage and current are monitored in signal waveforms on **WAVE** mode.

- Actual pulse signal waveforms applied on a device at the measurement point can be monitored on the time axis as with oscilloscope (WAVE) mode without extra probing.
- By confirming the waveform, appropriate pulse width and measurement timing can be decided.
- This function also helps confirming the abnormality caused by heat such as a oscillation, etc.

Full automation by high affinity with PC

■ **Semiconductor parameter measurement software CS-810 (optional)**

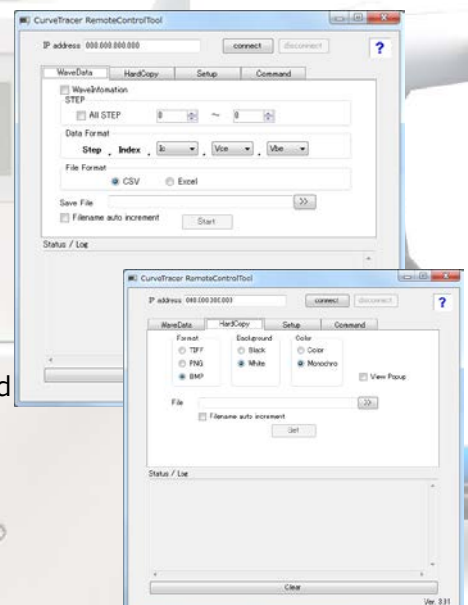

This is a software performing auto measurement through remote controlling with curve tracer main unit. This software can execute stress test; which was hard to do using traditional curve tracers, and can measure temperature characteristics of devices, while controlling a hotplate or a thermostatic chamber.

■ **USB memory:**

Graphic Images: Data, and Setup conditions
Formats: TIFF,BMP,PNG. (Black or White color of background, color or monochrome)
Waveform data: Text (CSV) and in Binary

■ **Remote Control tool** (free download)
In case that security policy restricts use of USB, the remote control tool for PC is provided.

■ **Ethernet:**

Provided as a standard function (on the back side of Main unit)

Automatic measurement connecting with PC, Scanner, Thermostatic chamber, etc. are available.

■ Sweep

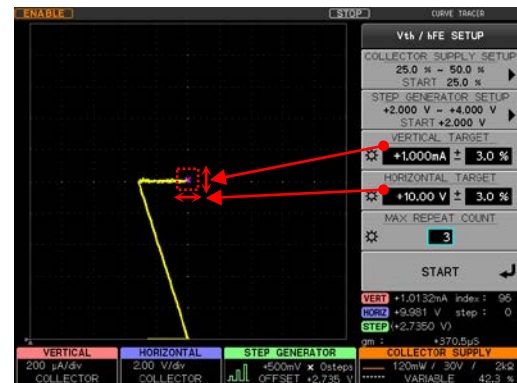

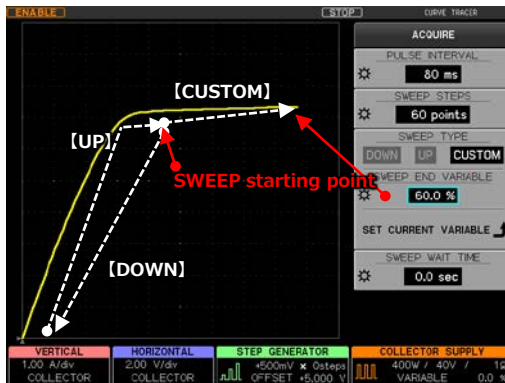

Number of points to, sweeping speed, resolution, and the DOWN/UP sweep can be set at your needs. As the CUSTOM sweep performs sweeping in high speed and high resolution measurement.

■ Limit-SWEEP function (CS-800 option)

This function puts limits on current and voltage through usual sweep measurement for device protection purpose and stopping the sweep at the target.

■ Vth-hFE auto search function (CS-800 option)

This function automatically finds the Vth-hFE with the setting of conditions. There will be no need for complicated operations anymore.

Separate knobs for easy operations

■ CONSTANT function with CS-800 (optional)

Bias constant voltage or constant current. With combination of semiconductor parameter measurement software CS-810, the curve tracer supports Auto stress test.

Optional Pulse Unit

This is an optional unit prevents the characteristic change and the breakdown from getting heat. We can configure the rising time of the pulse from 1/3/5ms, pulse width within the range of 1ms to 20ms, interval time within the range of 100ms to 2s. (This unit will be attached inside the curve tracer, so please order this unit when you order the curve tracer, or we will ask you to send your tracer to our factory.)

Scanner System : CS-700

A software application, CS-810, will automate reconnection of terminals of 6 in 1, 2 in 1 or multiple devices clips.

CS -810 even controls relay units, thermostatic chambers and hot plates, so it can measure the temperature characteristics of each chips in 6 in 1 modules.

Software Application for parameter measurement of semiconductors : CS-810

CS-810 is an optional Software application that controls curve tracers, scanners, hotplates performing measurement and thereby automates the measurement. This makes improvement great in work efficiency.

Automates:

Measurement → Recording → Judgment
Improvements in efficiency to replace task that was traditionally performed manually

Switches automatically multiple semiconductor modules and discrete devices to be targeted when you perform measurement

Hotplates are also remote-controllable, so Automatic measurement of 6 in 1 module can be performed too.

Easy to transfer the configuration measured to PC

By transferring the configuration measured manually on curve tracer to PC, you can set up the sequence.

The programming knowledge is not required and anyone can set up it easily.

This key copies the configurations in the curve tracer to PC.

This key copies the configurations in PC to the Curve trace.

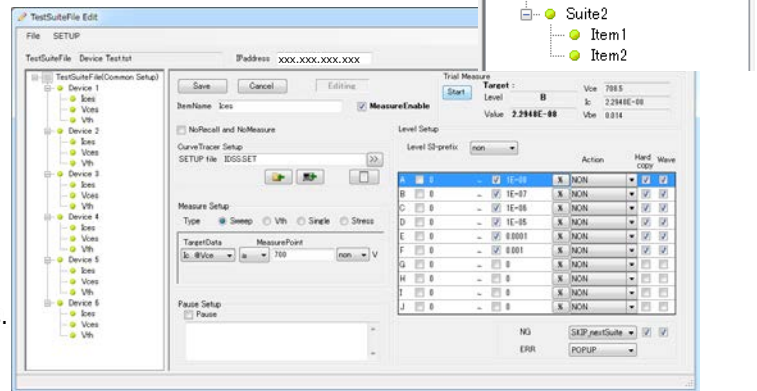

Categorization to the levels based on the measured value.

You can set 10 levels to which acquired result will be categorized.

For each levels, events to be performed, such as halting the measurement, skipping the measurement of such item
Showing an alert, Copying the waveform as an image, exporting to CSV files.

This window is useful when you specify the threshold for the levels.

Measurement of static characteristics (Leakage current, Saturation voltage, VF, Vth, etc.)

Measurement type : Sweep

- Point with the larger data than the specified value.
- Point with the smaller data than the specified value.
- Point with the data closer to the specified value.
- Point with data equal to the specified value under interpolation.

Measurement type : Stress

Logging of voltage or current is available by biasing constant voltage or constant current for a long time. This is used for Stress test and reliability test.

Trial Measurement:

This is a function for debugging and the sequence can be confirmed.

Measurement type : Vth

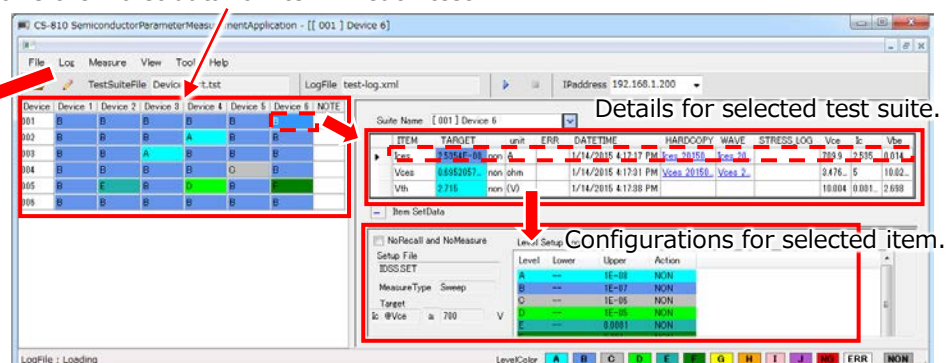

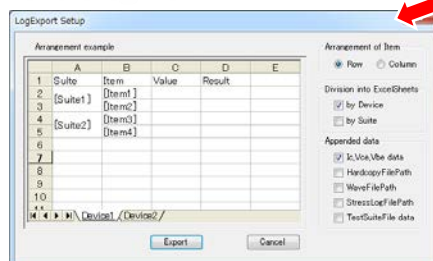

Makes measurement with the curve tracer's Vth Search function.

Software Application for parameter measurement of semiconductors : CS-810

■ Measurement of devices

Multiple devices measurement and recordings can be performed in a short time.

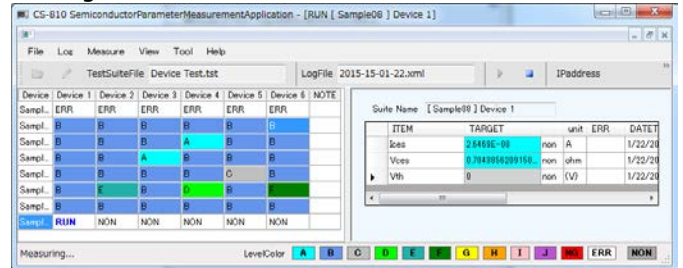

Operators just need to input sample name according to the device replacements and connection changes to repeat the same measurements. Judgments (Pass/Fail) at conditions given will be shown for each measurement, and images and waveforms data also will be stored automatically.

1 Input sample name and set it to Fixture.

2 Displays the measured value and the judgment results during measurement.

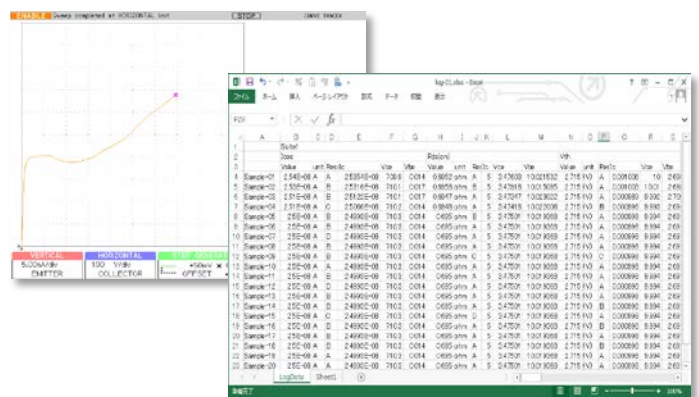

3 Popup stops the measurement or gives instructions based on the measurement results.

4 Popup stops the measurement or gives Instructions based on measured items.

5 Logs on the measurement can be exported to CSV file or Excel file afterwards. Logs on Stress test will be saved on separate files. Re-measurement of the selected item can be performed.

Measurement function of circuit modules

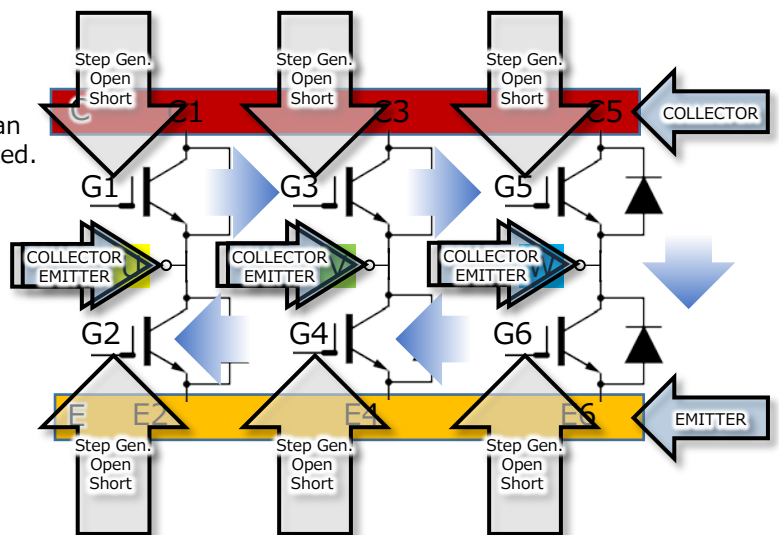

This software controls scanner system as well as The curve tracer. As it even controls open/short and HV/VC, all the measurement for a module can be fully automatically performed without a need for unplugging.

Configuration on one-circuit can be applied to the other circuit as the application supports copy & paste.

Unused Gates and Emitters can be short-circuited.

■ Evaluation of Semiconductor Temperature characteristics measurement

CS-810 controls hotplates too. Even measurement that takes a long time such as per temperature can also be performed automatically.

Parameter measurement

Parameter measurement

Parameter measurement

Auto temperature controlling

Currently, we just offer fixtures with hotplates, but we are trying our best to offer a unit simply provides hotplates or fixed-temperature chamber. For details on supported units, feel free to ask us.

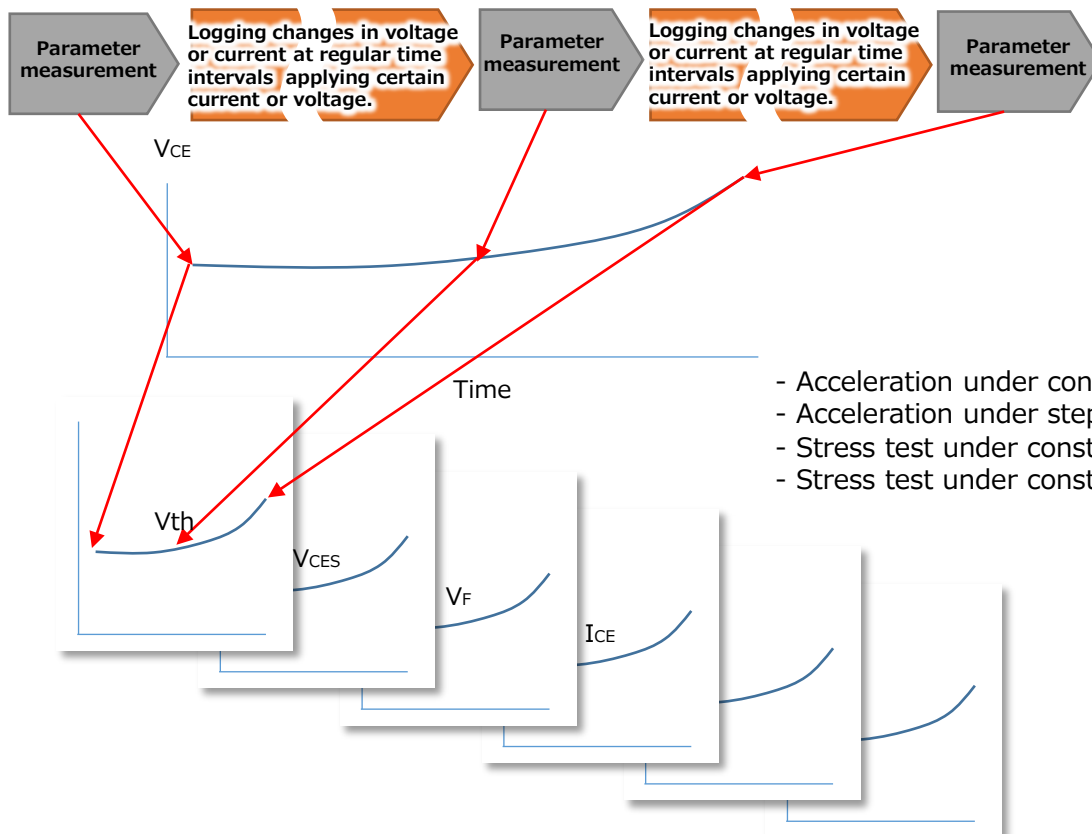

■ Stress test

A wide variety of parameters can be incorporated in stress test.

This software supports long-time reliability tests. While the software watches the voltage and the current via curve tracers, diffs of those are logged.

Auto measurement of parameters is available in the track or around of the stress test. The biasing will stop in excess of the limit value which is set for current or voltage as a lower and a upper limits.

The software measures I_c or V_{ce} (Interval: 10s to 2h) keeping a certain voltage or current (10s to 1,000h)

- Acceleration under constant stress
- Acceleration under step-stress
- Stress test under constant DC current
- Stress test under constant low voltage

Software Application for parameter measurement of semiconductors : CS-810

■ Test of Discrete devices

Measurement of multiple devices with one touch operation after cable connection

CS-810 will let us copy the configuration for one circuits to the others up to 10CH*, making it easier to iterate the circuits and perform measurement for each Circuit.

* Up to 10 systems operate in parallel on CS-700 Series.

Measurement of wafers

Devices on wafers can be measured by connecting a probe system.

Contact us for the customized semiconductor parameter measurement software.

We have cables for connections to probes. Some terminal has interlocking feature. So you can use it safely.

Order Information

	Model Name	Model Number	Remarks
Main unit	Semi-conductor Curve tracer	CS-3100	3kV
		CS-3200	3kV, 400A
		CS-3300	3kV, 1,000A
		CS-5100	5kV
		CS-5200	5kV, 400A
		CS-5300	5kV, 1,000A
		CS-5400	5kV, 1,500A
		CS-10400	10kV, 4,000A
		CS-10800	10kV, 8,000A
		CS-12800	12kV, 8,000A
		CS-15800	15kV, 8,000A
Fixture	Fixture S	CS-301	Come with CS-3100
	Fixture M	CS-302	Come with CS-3200/3300
		CS-303	Come with CS-5100/5200/5300
		CS-304	Come with CS-5400
