

POWER ANALYZER PW6001

Power measuring instruments

Improve Power Conversion Efficiency

Industry-Leading Accuracy and Maximum 12 Channels* Hioki Power Analyzers Set Next Generation Standards for Power Efficiency Testing

Basic accuracy for power $\pm 0.02\%^*$

Achieving true power analysis

High accuracy, wideband, and high stability. The Hioki PW6001 combines the 3 important elements of power measurement and basic performance backed by advanced technology to achieve unsurpassed power analysis.

Strengthened resistance to noise and temperature fluctuations in the absolute pursuit of measurement stability

The custom-shaped solid shield made completely of finely finished metal and optical isolation devices used to maintain sufficient creepage distance from the input terminals dramatically improve noise resistance, provide optimal stability, and achieve a CMRR performance of 80 dB/100 kHz. Add the superior temperature characteristics of ±0.01%/°C and you now have access to a power analyzer that delivers top-of-the-line measurement stability.

Solid shield

Optical isolation device

3x improvement in temperature characteristics compared to legacy model

TrueHD 18-bit converter* measures widely fluctuating loads with extreme accuracy

A built-in 18-bit A/D converter provides a broad dynamic range. Even loads with large fluctuations can be shown accurately down to tiny power levels without switching the range. Further, a digital LPF is used to remove unnecessary high-frequency noise, for accurate power analysis.

*True HD : True High Definition

Fast, simultaneous calculation functions achieved with Power Analysis Engine II

All measurements, including period detection, wideband power analysis, harmonic analysis, and waveform analysis, are digitally processed independently and with no effect on each other. Fast calculation processing is used to achieve a data update speed of 10 ms while maintaining maximum accuracy.

AAF: Antialiasing filter

Filter for preventing aliasing distortion in harmonic calculations

DC accuracy is indispensable for achieving correct efficiency measurements

For example, when measuring the efficiency of a DC/AC converter, not only AC accuracy but also DC accuracy are equally important. With the PW6001, a DC measurement accuracy of $\pm 0.02\%$ rdg. $\pm 0.05\%$ f.s.* delivers correct

and stable efficiency measurements.

| | DC accuracy | ±0.02% rdg. |
|--|-------------|-------------|
|--|-------------|-------------|

Accuracy of efficiency is determined by AC accuracy and DC accuracy.

*Unit accuracy only

Get a combined accuracy of ±0.07% rdg. even with current sensor

Add $\pm 0.05\%$ rdg. accuracy of the current sensor to the PW6001's basic accuracy of $\pm 0.02\%$ rdg. to achieve top-of-the-line accuracy of $\pm 0.07\%$. Choose from a diverse array of sensors to cover very small currents from 10mA up to large 1000A loads.

High-accuracy AC/DC current sensors

DC, 0.1 Hz to 2 MHz frequency bandwidth

Broad and flat frequency characteristics

Power measurements across wide bandwidths are required for supporting high-speed switching devices such as SiC. Compared even to the Hioki 3390 Power Analyzer, the PW6001 is engineered with 10x the frequency band and sampling performance.

High-speed sampling of 5 MS/s for true frequency analysis

Measurements based on sampling theorem are required to perform an accurate power analysis of PWM waveforms. The Hioki PW6001 features direct sampling of input signals at 5 MS/s, resulting in a measurement band of 2 MHz. This enables analysis without aliasing error.

Dual sampling

Achieve independent sampling of waveform recordings and power analysis. Sampling for waveform recordings can be set freely, while maintaining a power analysis of 5 MS/s.

Large capacity waveform storage

Enjoy 1 Mword x 6 channels of data storage for voltage and current, making it possible to record signals for up to 100 seconds (at 10 kS/s).

Analyze waveforms without an oscilloscope

In addition to voltage and current waveforms, torque sensor and encoder signals can also be displayed simultaneously. The PW6001 is also built in with triggers, pre-triggers, other triggers convenient for motor analysis such as for PWM waveforms, as well as encoder pulse triggers.

Wideband current probes supported

When combined with the HIOKI CT6700, it is also possible to measure minute currents of 1 mA. This is perfect for observing leakage current waveforms in inverters.

Built-in current sensor phase shift function

For accurate power measurement, both amplitude accuracy and phase accuracy specifications are important. Use of the phase shift function allows improvements in measurement accuracy for both high-frequency and low power factor signals. Enter the calibration value for the current sensor to optimize accuracy. Current sensor

*Calibration and test results tables can be purchased separately.

Harmonic analysis up to 1.5 MHz

Wideband harmonic analysis is provided as a standard feature to a max. 100th order for fundamental frequencies 0.1 Hz to 300 kHz and an analysis band of 1.5 MHz. Analysis of fundamental waves in motors and measurement of distortion rate in the transmission waveforms for wireless power supplies are now possible.

Unrestricted conversion of phase voltage and line-to-line voltage

Use of the Δ -Y conversion function allows for the calculation of phase voltage and phase power of 3-phase motors whose neutral points cannot be accessed. Further, the Y- Δ conversion function lets you calculate 3-phase 4-wire line-to-line voltage.

Digital LPF for displaying the waveform you want to view

Select a cutoff frequency for the measurement target. Digital LPF greatly reduces noise to let you display the waveform you want to view.

Display the waveforms for fundamental frequencies

Specially designed for current sensors to achieve highly precise measurement

With direct wire connection method

The wiring of the measurement target is routed for connecting to the current input terminal. However, this results in an increase in the effects of wiring resistance and capacitive coupling, and meter loss occurs due to shunt resistance, all of which lead to larger accuracy uncertainty.

Measurement example using the direct wire connection method

A current sensor is connected to the wiring on the measurement target. This reduces the effects of wiring and meter loss, allowing measurements with wiring conditions that are close to the actual operating environment for a highly efficient system.

Measurement example using the current sensor method

Compared to the direct wire connection method, measurement with conditions closer to the actual operation environment of a power converter is achieved.

Dual knobs

Highly intuitive user interface

Seamless operability

Time spent on operations is reduced, to allow focused concentration on analysis.

9-inch touch screen with soft keypad

Synchronization function for real-time connection of 2 units at a maximum distance of 500 m

Build a 12-channel power meter using "numerical synchronization"

For multi-point measurements, use the numerical synchronization function to transfer power parameters from the slave device to aggregate at the master in real-time, essentially enabling you to build a 12-channel power analysis system

- Real-time display of slave instrument measurement values on master instrument screen

- Real-time efficiency calculations between master/slave
- Save data for 2 units on recording media in master instrument

Simply transfer waveforms with "waveform synchronization"

Achieve real-time* transfer of 5 MS/s 18-bit sampling data. Measurement waveforms on the slave instrument are displayed without modification on the master unit, paving the way for new applications for power analyzers, such as measurement of the voltage phase difference between two

separate devices. synchronization

/ax.500 m

Master Display max. 6 channels of waveforms for master and slave

Waveform

Slave Transfer waveform data for max. 3 channels

- Real-time display of slave instrument waveforms on master instrument screen - Harmonic analysis and fundamental wave analysis for master

- instrument and slave instrument Simultaneously measure waveforms on master device while using the slave

to trigger

*For both master instruments and slave instrument, waveform synchronization operates only when there are 3 or more channels. Max. ±5 sampling error

(PW6001-11/-12/-13/-14/-15/-16)

Models with motor analysis & D/A output

Diverse motor analysis functions

| CH A ANALOG PULSE 20V | 0-50V |

| Waveform output | Waveform output x max. 12 channels* & analog output x 8 channels | | | |
| * Varies a | ccording to the nu | mber of channels ins | talled in the PW6001 | |

*During waveform output, accurate reproduction is possible at an output of 1 MS/s and with a sine wave up to 50 kHz.

Conversion efficiency measurement of inverters with built-in SiC

TrueHD

18-bit resolution

SiC measurement achieved with high resolution

High resolution is required for the high precision measurement of PWM waveforms for SiC semiconductors with low ON resistance. TrueHD 18-bit is achieved at a level of

precision that has never been seen before.

Detailed analysis of PWM waveforms

A cursor readout function*, zoom function*, and trigger/ pre-trigger function, which are not available on the Hioki 3390, are built-in on this unit. You can use the touch screen and dual knobs for unrestricted analysis of waveforms.

*Available soon.

Line-to-line voltage waveform and line current waveform for 3-phase motor

Simultaneous harmonic analysis for input/output

Analyze harmonic data that is synchronized to the fundamental waveforms of both the input and output of an inverter.

A maximum of 6 systems can be analyzed simultaneously. Max. 6 systems Simultaneous harmonic analysis

Observe phase voltage waveforms

Use the Δ -Y conversion function to display the calculations for phase voltage at the waveform level from the line-to-line voltage of the motor, enabling you to analyze the harmonics of the phase voltage waveforms.

 $\Delta\text{-}Y \text{ conversion}$

Phase voltage waveform using $\Delta\text{-}Y$ calculation

Harmonic analysis of transmission frequency

Measure the efficiency of wireless power supply devices such as those found in electric vehicles. Use of the wideband harmonic analysis function up to a fundamental wave of 300 kHz allows the analysis of waveform distortion rate

and harmonic waves in the vicinity of 100 kHz used for wireless power transmission. Wideband mode

Save data with a single touch

Use the [SAVE] key to save numerical data, and the [COPY] key to copy the screen. You can also enter comments on the saved data.

Accurate measurement of low power factor power

With wireless power supplies, the power factor drops due to the inductance component of the sending/receiving elements of energy. Use of the phase shift function in the PW6001 lets you accurately measure both high-frequency and lower power factor power.

Enter phase calibration values for each frequency to correct high-frequency phase characteristics.

One-touch settings take you to measurement immediately

The built-in easy setup function allows you to simply select the type of measurement line and immediately start measurement using the automated optimum settings.

Advanced electrical angle measurement function

The PW6001 features a built-in electric angle measurement function required for the measurement of motor parameters in high-efficiency synchronized motors and the analysis of vector control via dq coordinate systems. Make real-time measurements of phases for voltage and current fundamental wave components based on encoder pulses. Further, zero-adjustment of the phase angle when induced voltage occurs allows phase measurement at the induction voltage standard. Finally, the PW6001 can detect the forward/reverse from A phase and B phase pulses to enable 4-quadrant analysis of torque and RPM.

Rackmount support

Optimal full rack size for test benches and production inspection lines

Full rack size

Fast 10 ms calculation of power in transient state

Measure power transient states, including motor operations such as starting and accelerating, at 10ms update rates. Automatically measure and keep up with power with fluctuating

Automatic following of fundamental wave even if the frequency fluctuates, from low to high frequencies

Simultaneous measurement of 2 motor powers

The PW6001 is engineered with the industry's first built-in dual mode motor analysis function that delivers the simultaneous analysis of 2 motors. Simultaneous measurement of the motor power for HEV driving and power generating is now possible.

generation is now possible.

Example of 2 motor measurement

Assess efficiency and loss at a glance

In addition to the measurement of power generated by solar cells, efficiency rate of conditioners, loss, and the measurement of power from purchased electricity when power systems are linked are also possible at the same time.

Harmonic analysis, important for linking systems

Conveniently evaluate according IEC61000-4-7 using the builtin IEC standard mode. You can also limit the number of THD calculations as required by the standard.

Confirm harmonic wave conditions on a bar graph at a single glance

Power conditioner testing

Parameters required for power conditioners, such as fundamental wave reactive power Qfnd, DC ripple rate, and 3-phase unbalanced rate, can be measured and displayed simultaneously. The required measurement data can be viewed at a glance, improving test efficiency. Various

measurement

Measure output from environmental sensors

Using the independent input mode in the motor analysis function, you can measure the analog voltage signals from environmental testing devices such as insolation meters, thermometers, wind speed meters, and light meters, on a maximum

speed meters, and light meters, on a maximum of 2 channels. The signals can be recorded at the same time as power. Analog signal Pulse signal Light meter Light meter Insolation meter Wind speed meter

Simultaneous analysis of system and power generation

With the dual vector display, you can see the 3-phase balancing conditions for both the system and power generation at a glance.

Measure the efficiency of power conditioners

By using the numerical synchronization function, you can take measurements with complete synchronization of power conditioners for 2 systems. All power parameters can be aggregated on the master instrument, and the efficiency for each or the overall efficiency can be calculated and displayed.

Application 6

Test and evaluate substations, plants and railroads

2-system

vector display

Measure phase difference between 2 separate points

Use the waveform synchronization function to measure the phase relationship between 2 points separated by a maximum distance of 500 m. Due to insulation with an optical connection cable, measurement can be performed safely even if the ground potential between the 2 points is not the same.

D/A output waveforms captured 500m away

Transfer voltage/current waveforms taken by the slave instrument located as far as 500m away and output the signals from the master device. When combined with a Hioki MEMORY HiCORDER, timing tests and simultaneous analysis of multiple channels for 3-phase power are possible.

- Save interval data, for transfer later to USB flash drive

PC Communication Software – PW Communicator

Internal memory

PW Communicator is an dedicated application software for communicating between a PW6001 power meter and a PC. Free download is available from the Hioki website. The application contains convenient functions for setting the PW6001, monitoring the measurement values, acquiring data via communication, computing efficiency, and much more.

LabVIEW Driver (Available soon)

Value monitoring

Display the PW6001's measurement values on the PC screen. You can freely select up to 64 values, such as voltage, current, power, and harmonics.

Waveform monitoring

Monitor the voltage, current, and waveforms measured by the meter right on the PC screen.

Meter setting Configure the connected PW6001 from the PC screen.

Synchronous measurement

Compute the input/output efficiency of a power converter and similar operations when using multiple units of PW6001. In addition to the PW6001, you can also batch control other Hioki power meters, such as the PW3335, PW3336, and PW3337.

Saving data as CSV file

Record 180 or more measurement data to a CSV file at fixed intervals. The shortest interval between recordings is 200 ms.

PW Communicator Specifications

| Availability | Free download from the Hioki website |

Frequency measurement Number of measurement channels (f1 to f6), base

-

1.....

. . . faile

-1011

| Number of measurement | Max. 6 channels (f1 to f6), based on the number of input channels |
|-----------------------|---|

| channels | |
|--------------------|--|
| Measurement source | Select from U/I for each connection. |
| Measurement method | Reciprocal method + zero-cross sampling value correction Calculated from the zero-cross point of waveforms after application of the zero-cross filter. |
| Measurement range | 0.1 Hz to 2 MHz (Display shows 0.00000 Hz or Hz if measurement is not possible.) |
| Accuracy | $\pm 0.05\%$ rdg. ± 1 dgt. (with a sine wave that is at least 30% of the measurement source's measurement range) |
| Display format | 0.10000 Hz to 9.99999 Hz, 9.9000 Hz to 99.9999 Hz, 99.000 Hz to 99.999 Hz, 0.99000 KHz to 9.99999 KHz, 9.9000 Hz to 99.999 Hz, 9.9000 Hz to 999.999 kHz, 0.99000 MHz to 2.00000 MHz |

Integration measurement

| Measurement modes | | S or DC for each connection (DC mode can only be selected when using an | | |
|---------------------------|---|--|--|--|
| | | sor with a 1P2W connection). | | |
| Measurement parameters | | | | |
| | Ih+ and Ih- are measured only in DC mode. Only Ih is measured in RMS mode. | | | |
| Measurement method | Digital calculation based on current and active power values | | | |
| | DC mode | Every sampling interval, current values and instantaneous power values are integrated separately for each polarity. | | |
| | RMS mode | The current RMS value and active power value are integrated for each measurement interval. Only active power is integrated separately for each polarity. | | |
| Display resolution | 999999 (6 digits + decimal point), starting from the resolution at which 1% of each range is f.s. | | | |
| Measurement range | 0 to ±99999.9 | 0 to ±9999.99 TAh/TWh | | |
| Integration time | 10 sec. to 9 | 999 hr. 59 min. 59 sec. | | |
| Integration time accuracy | ±0.02% rdg | ±0.02% rdg. (0°C to 40°C) | | |
| Integration accuracy | ±(current or | active power accuracy) ±integration time accuracy | | |
| Backup function | None | | | |

Harmonics measurement

| Number of measurement channels | Max. 6 channels, based on the number of built-in channels | |
|-----------------------------------|--|--|
| Synchronization source | Based on the synchronization source setting for each connection. | |
| Measurement modes | Select from IEC standard mode or wideband mode (setting applies to all channels). | |
| Measurement parameters | Harmonic voltage RMS value, harmonic voltage content percentage, harmonic voltage phase angle, harmonic current RMS value, harmonic current content percentage, harmonic current phase angle, harmonic active power, harmonic power content percentage, harmonic voltage/current phase difference, total harmonic voltage distortion, total harmonic current distortion, voltage unbalance rate, current unbalance rate (no intermediate harmonic parameters in IEC standard mode) 32 bits | |
| length | | |
| Antialiasing | Digital filter (automatically configured based on synchronization frequency) | |
| Window function | Rectangular | |
| Grouping | OFF / Type 1 (harmonic sub-group) / Type 2 (harmonic group) | |
| THD calculation method | THD_F / THD_R (Setting applies to all connections.) Select calculation order from 2nd order to 100th order (however, limited to the maximum analysis order for each mode). | |

(1) IEC standard mode

| Mea | surement method | Zero-cross synchronization cal source) | culation method (same wind | ow for each synchronization |
|-------|-------------------|---|--------------------------------|-----------------------------|
| | | Fixed sampling interpolation cal | | thinning in window |
| | | IEC 61000-4-7:2002 compliant v | vith gap overlap | |
| Sync | chronization | 45 Hz to 66 Hz | | |
| frequ | lency range | | | |
| Data | update rate | Fixed at 200 ms. | | |
| Anal | ysis orders | 0th to 50th | | |
| Wind | dow wave number | When less than 56 Hz, 10 waves | s; when 56 Hz or greater, 12 w | aves |
| Num | ber of FFT points | 4096 points | | |
| Accu | iracy | | | |
| | Frequency | Harmonic voltage | Harmonic power | Phase difference |

| | and current | | |
|-----------------------|--|------------------------|-------------------------------|
| DC (0th order) | ±0.1% rdg. ±0.1% f.s. | ±0.1% rdg. ±0.2% f.s. | |
| 45 Hz ≤ f ≤ 66 Hz | ±0.2% rdg. ±0.04% f.s. | ±0.4% rdg. ±0.05% f.s. | ±0.08° |
| 66 Hz < f ≤ 440 Hz | ±0.5% rdg. ±0.05% f.s. | ±1.0% rdg. ±0.05% f.s. | ±0.08° |
| 440 Hz < f ≤ 1 kHz | ±0.8% rdg. ±0.05% f.s. | ±1.5% rdg. ±0.05% f.s. | ±0.4° |
| 1 kHz < f ≤ 2.5 kHz | ±2.4% rdg. ±0.05% f.s. | ±4% rdg. ±0.05% f.s. | ±0.4° |
| 2.5 kHz < f ≤ 3.3 kHz | ±6% rdg. ±0.05% f.s. | ±10% rdg. ±0.05% f.s. | ±0.8° |
| | Power is defined for a power fac Accuracy specifications are de | | input that is greater than or |

Accuracy specifications are defined for fundamental wave input that is greater than or equal to 50% of the range. Add the current sensor accuracy to the above accuracy figures for current, active power, and phase difference. Add $\pm 0.02\%$ rdg. for voltage and active power at or above 1000 V (however, figures are reference values). Even for input voltages that are less than 1000 V, the effect will persist until the input resistance temperature falls.

(2) Wideband mode

| Measurement method | Zero-cross synchronization calculation method (same window for each synchron source) with gaps | | |
|------------------------------------|---|-----------------------|---------------------------|
| | Fixed sampling interpolation calculation m | ethod | |
| Synchronization frequency range | 0.1 Hz to 300 kHz | | |
| Data update rate | Fixed at 50 ms. | | |
| Maximum analysis order and | Frequency | Window wave number | Maximum analysis order |
| Window wave number | 0.1 Hz ≤ f < 80 Hz | 1 | 100th |
| | 80 Hz ≤ f < 160 Hz | 2 | 100th |
| | 160 Hz ≤ f < 320 Hz | 4 | 60th |
| | 320 Hz ≤ f < 640 Hz | 2 | 60th |
| | 640 Hz ≤ f < 6 kHz | 4 | 50th |
| | 6 kHz ≤ f < 12 kHz | 2 | 50th |
| | 12 kHz ≤ f < 25 kHz | 4 | 50th |
| | 25 kHz ≤ f < 50 kHz | 8 | 30th |
| | 50 kHz ≤ f < 101 kHz | 16 | 15th |
| | 101 kHz ≤ f < 201 kHz | 32 | 7th |
| | 201 kHz ≤ f < 300 kHz | 64 | 5th |

The instrument provides phase zero-adjustment functionality using keys or communications commands (only available when the synchronization source is set to Ext). Add the following to the accuracy figures for voltage (U), current (I), active power (P), and phase difference. (Unit for f in following table: kHz) Phase zero-adjustment Accuracy

Lu Disease diff

| Frequency | | Harmonic voltage and current | Harmonic power | Phase difference |
|---|-------|------------------------------|----------------|-------------------|
| DC | | ±0.1% f.s. | ±0.2% f.s. | - |
| 0.1 Hz ≤ f < 30 | 0 Hz | ±0.05% f.s. | ±0.05% f.s. | ±0.1° |
| 30 Hz ≤ f < 45 | 5 Hz | ±0.1% f.s. | ±0.2% f.s. | ±0.1° |
| 45 Hz ≤ f ≤ 66 | 6 Hz | ±0.05% f.s. | ±0.1% f.s. | ±0.1° |
| 66 Hz < f ≤ 1 I | kHz | ±0.05% f.s. | ±0.1% f.s. | ±0.1° |
| 1 kHz < f ≤ 10 kHz | | ±0.05% f.s. | ±0.1% f.s. | ±0.6° |
| 10 kHz < f ≤ 50 kHz | | ±0.2% f.s. | ±0.4% f.s. | ±(0.020×f)° ±0.5° |
| $50 \text{ kHz} < f \le 100$ | 0 kHz | ±0.4% f.s. | ±0.5% f.s. | ±(0.020×f)° ±1° |
| 100 kHz < f ≤ 50 | 0 kHz | ±1% f.s. | ±2% f.s. | ±(0.030×f)° ±1.5° |
| 500 kHz < f ≤ 900 | 0 kHz | ±4% f.s. | ±5% f.s. | ±(0.030×f)° ±2° |
| The figures for voltage, current, power, and phase difference for frequencies in excess or 300 kHz are reference values. When the fundamental wave is outside the range of 16 Hz to 850 Hz, the figures for voltage, current, power, and phase difference for frequencies other than the fundament wave are reference values. | | | | |

wave are reference values. When the fundamental wave is within the range of 16 Hz to 850 Hz, the figures for voltage, current, power, and phase difference are in excess of 6 Hz are reference values. Accuracy values for phase difference are defined for input for which the voltage and current for the same order are at least 10% f.s.

Waveform recording

| Number of measurement channels | Voltage and current waveforms | Max. 6 channels (based on the number of installed channels) |
|-----------------------------------|---|---|
| | Motor waveforms * | Max. 2 analog DC channels + max. 4 pulse channels |
| Recording capacity | 1 Mword × ((voltage + cu | irrent) × number of channels + motor waveforms *) |
| Waveform resolution | 16 bits (Voltage and curr | ent waveforms use the upper 16 bits of the 18-bit A/D.) |
| Sampling speed | Voltage and current waveforms | Always 5 MS/s |
| | Motor waveforms * Motor pulse * | Always 50 kS/s Always 5 MS/s |
| Compression ratio | 1/1, 1/2, 1/5, 1/10, 1/20, 1/50, 1/100, 1/200, 1/500 | |
| | (5 MS/s, 2.5 MS/s, 1 MS/s, 500 kS/s, 250 kS/s, 100 kS/s, 50 kS/s, 25 kS/s, 10 kS/s) | |
| | However, motor waveforms* are only compressed at 50 kS/s or less. | |
| Recording length | 1 kWord / 5 kWord / 10 kWord / 50 kWord / 100 kWord / 500 kWord / 1 Mword | |
| Storage mode | Peak-to-peak compression or simple thinning | |

| Trigger mode | SINGLE or NORMAL (with forcible trigger setting) | |
|----------------|--|--|
| Pre-trigger | 0% to 100% of the recording length, in 10% steps | |
| Trigger source | Voltage and current waveform, waveform after voltage and current zero-cross filter, manual, motor waveform*, motor pulse* | |
| | | |
| Trigger slope | Rising edge, falling edge | |
| Trigger level | ±300% of the range for the waveform, in 0.1% steps | |
| | *Motor waveform and motor pulse: Motor analysis and D/A-equipped models only | |

Motor analysis (PW6001-11 to -16 only)

| Number of input channels | 4 channels | |
|--|---|--|
| | CH A Analog DC input / Frequency input / Pulse input | |
| | CH B Analog DC input / Frequency input / Pulse input | |
| | CH C Pulse input | |
| | CH D Pulse input | |
| Operating mode | Single, dual, or independent input | |
| Input terminal profile | Isolated BNC connectors | |
| Input resistance (DC) | 1 MΩ ±50 kΩ | |
| Input method | Function-isolated input and single-end input | |
| Measurement parameters | Voltage, torque, rpm, frequency, slip, motor power | |
| Maximum input voltage | ±20 V (analog DC and pulse operation) | |
| Additional conditions for quaranteed accuracy | Input: Terminal-to-ground voltage of 0 V, after zero-adjustment | |

(1) Analog DC input (CH A/CH B)

| Measurement range | ±1 V / ±5 V / ±10 V |
|------------------------------------|--|
| Effective input range | 1% to 110% f.s. |
| Sampling | 50 kHz, 16 bits |
| Response speed | 0.2 ms (when LPF is OFF) |
| Measurement method | Simultaneous digital sampling, zero-cross synchronization calculation method (averaging between zero-crosses) |
| Measurement accuracy | ±0.05% rdg. ±0.05% f.s. |
| Temperature coefficient | ±0.03% f.s./°C |
| Effects of common- mode voltage | $\pm 0.01\%$ f.s. or less with 50 V applied between the input terminals and the enclosure (DC / 50 Hz / 60 Hz) |
| LPF | OFF (20 kHz) / ON (1 kHz) |
| Display range | From the range's zero-suppression range setting to ±150% |
| Zero-adjustment | Voltage ±10% f.s., zero-correction of input offsets that are less |

(2) Frequency input (CH A/CH B)

| Detection level | Low: 0.5 V or less; high: 2.0 V or more |
|-------------------------------|---|
| Measurement frequency band | 0.1 Hz to 1 MHz (at 50% duty ratio) |
| Minimum detection width | 0.5 µs or more |
| Measurement accuracy | ±0.05% rdg. ±3 dgt. |
| Display range | 1.000 kHz to 500.000 kHz |

(3) Pulse input (CH A / CH B / CH C / CH D)

| Detection level | Low: 0.5 V or less; high: 2.0 V or more |
|--------------------------------------|---|
| Measurement frequency band | 0.1 Hz to 1 MHz (at 50% duty ratio) |
| Minimum detection width | 0.5 µs or more |
| Pulse filter | OFF / Weak / Strong (When using the weak setting, positive and negative pulses of less than 0.5 μ s are ignored. When using the strong setting, positive and negative pulses of 5 μ s are ignored.) |
| Measurement accuracy | ±0.05% rdg. ±3 dgt. |
| Display range | 0.1 Hz to 800.000 kHz |
| Unit | Hz / r/min. |
| Frequency division setting range | 1~60000 |
| Rotation direction detection | Can be set in single mode (detected based on lead/lag of CH B and CH C). |
| Mechanical angle origin detection | Can be set in single mode (CH B frequency division cleared at CH D rising edge). |

autout.

| Number of output channels | 20 channels | | |
|------------------------------|--|---|--|
| Output terminal profile | D-sub 25-pin connec | tor × 1 | |
| Output details | Switchable between waveform output and analog output (select from basic measurement parameters). Waveform output is fixed to CH1 to CH12. | | |
| D/A conversion resolution | 16 bits (polarity + 15 bits) | | |
| Output refresh rate | Analog output Waveform output | 10 ms / 50 ms / 200 ms (based on data update rate for the selected parameter) 1 MHz | |
| Output voltage | Analog output Waveform output | ±5 V DC f.s. (max. approx. ±12 V DC) Switchable between ±2 V f.s. and ±1 V f.s., crest factor of 2.5 or greater Setting applies to all channels. | |
| Output resistance | 100 Ω ±5 Ω | | |
| Output accuracy | Analog output | Output measurement parameter measurement accuracy ±0.2% f.s. (DC level) | |
| | Waveform output | Measurement accuracy ±0.5% f.s. (at ±2 V f.s.) or ±1.0% f.s. (at ±1 V f.s.) (RMS value level, up to 50 kHz) | |
| Temperature coefficient | ±0.05% f.s./°C | | |

Display section

| 1 5 | | | | | |
|--------------------------|--|---|--|--|--|
| Display characters | English / Japanese / Chinese (simplified, available soon) | | | | |
| Display | 9" WVGA TFT color LCD (800 × 480 dots) with an LED backlight and analog resistive touch panel | | | | |
| Display value resolution | 999999 count (including integration values) | | | | |
| Display refresh rate | Measured values | Approx. 200 ms (independent of internal data update rate) When using simple averaging, the data update rate varies based on the number of averaging iterations. | | | |
| | Waveforms | Based on display settings | | | |

External interface

| Connector | USB Type A connector × 1 |
|-------------------------------|---|
| Electrical specifications | USB 2.0 (high-speed) |
| Power supplied | Max. 500 mA |
| Supported USB flash drives | USB Mass Storage Class compatible |
| Recorded data | Save/load settings files Save measured values/automatic recorded data (CSV format) Copy measured values/recorded data (from internal memory) Save waveform data, save screenshots (compressed BMP format) |

| () | |
|------------------------------|--|
| Connector | RJ-45 connector × 1 |
| Electrical specifications | IEEE 802.3 compliant |
| Transmission method | 10Base-T / 100Base-TX / 1000Base-T (automatic detection) |
| Protocol | TCP/IP (with DHCP function) |
| Functions | dedicated port (data transfers, command control) |

(3) GP-IB interface

| Communication method | IEEE 488.1 1987 compliant developed with reference to IEEE 488.2 1987 Interface functions: SH1, AH1, T6, L4, SR1, RL1, PP0, DC1, DT1, C0 |
|-------------------------|---|
| Addresses | 00 to 30 |
| Functions | Command control |

(4) RS-232C interface

| Connector | D-sub 9-pin connector x 1, 9-pin power supply compatible, also used for external control |
|-------------------------|---|
| Communication method | RS-232C, EIA RS-232D, CCITT V.24, and JIS X5101 compliant Full duplex, start stop synchronization, data length of 8, no parity, 1 stop bit |
| Flow control | Hardware flow control ON/OFF |
| Communications speed | 9,600 bps / 19,200 bps / 38,400 bps / 57,600 bps / 115,200 bps / 230,400 bps |
| Functions | Command control Used through exclusive switching with external control interface |

(5) External control interface

| () | |
|---------------------------|--|
| Connector | D-sub 9-pin connector × 1, 9-pin power supply compatible, also used for RS-232C |
| Power supplied | OFF/ON (voltage of +5 V, max. 200 mA) |
| Electrical specifications | 0/5 V (2.5 V to 5 V) logic signals or contact signal with terminal shorted or open |
| Functions | Same operation as the [START/STOP] key or the [DATA RESET] key on the control panel Used through exclusive switching with RS-232C |

(6) Two-instrument synchronization interface

| () | • | | | | |
|----------------|---|--|--|--|--|
| Connector | SFP optical transceiver, Duplex-LC (2-wire LC) | | | | |
| Optical signal | 850 nm VCSEL, 1 Gbps | | | | |
| Laser class | Class 1 | | | | |
| Fiber used | 50/125 µm multi-mode fiber equivalent, up to 500 m | | | | |
| Functions | Sends data from the connected slave instrument to the master instrument, which performs calculations and displays the results. | | | | |

Functional Specifications

Auto-range function

| Functions | The voltage and current ranges for each connection are automatically changed in response to the input. | | | | |
|--------------------|---|--|--|--|--|
| Operating mode | OFF/ON (selectable for each connection) | | | | |
| Auto-range breadth | Broad/narrow (applies to all channels) | | | | |
| | Broad The range is increased by one if the peak value is exceeded for the connection or if there is an RMS value that is greater than or equal to 110% f.s. The range is lowered by two if all RMS values for the connection are less than or equal to 10% f.s. (However, the range is not lowered if the peak value would be exceeded with the lower range.) | | | | |
| | Narrow The range is increased by one if the peak value is exceeded for the connection or if there is an RMS value that is greater than or equal to 105% f.s. The range is lowered by one if all RMS values for the connection are less than or equal to 40% f.s. (However, the range is not lowered if the peak value would be exceeded with the lower range). When Δ -Y conversion is enabled, the range reduction is determined by multiplying the range by $\frac{1}{\sqrt{2}}$. | | | | |

Time control function

| Timer control | OFF, 10 sec. to 9999 hr. 59 min. 59 sec. (in 1 sec. steps) | | | | |
|---------------------|--|--|--|--|--|
| Actual time control | OFF, start time/stop time (in 1 min. steps) | | | | |
| Intervals | OFF / 10 ms / 50 ms / 200 ms / 500 ms / 1 sec. / 5 sec. / 10 sec. / 15 sec. / 30 sec. 1 min. / 5 min. / 10 min. / 15 min. / 30 min. / 60 min. | | | | |

Hold functionality

| | 5 |
|-----------|--|
| Hold | Stops updating the display with all measured values and holds the value currently being displayed. |
| | Used exclusively with the peak hold function. |
| Peak hold | Updates the measured value display each time a new maximum value is set. Used exclusively with the hold function. |
| | |

Calculation functionality

(1) Rectifier

| ., | |
|----------------|---|
| Functions | Selects the voltage and current values used to calculate apparent and reactive power and power factor. |
| Operating mode | RMS/mean (Can be selected for each connection's voltage and current.) |
| | |
| (2) Scaling | |
| VT (PT) ratio | OFF/ 0.01 to 9999.99 |
| CT ratio | OFF/0.01 to 9999.99 |

(3) Averaging (AVG)

| Functions | All instantaneous measured values, including harmonics, are averaged. | | | | | | |
|--|--|--------|--------|---------------|---------------|-------------|-----------------|
| Operating mode | OFF / Simple averaging / Exponential averaging | | | | | | |
| Operation | Simple Averaging is performed for the number of simple averaging iterations averaging for each data update cycle, and the output data is updated. The data update rate is lengthened by the number of averaging iterations. | | | | | | |
| | Exponential Data is exponentially averaged using a time constant defined by the averaging data update rate and the exponential averaging response rate. | | | | | | |
| | During averaging operation, averaged data is used for all analog output and save data. | | | | | | |
| Number of simple averaging iterations | Number of averaging iterations | | 5 | 10 | 20 | 50 | 100 |
| | Data update rate | 10 ms | 50 ms | 100 ms | 200 ms | 500 ms | 1 sec. |

(4) Efficiency and loss calculations

| Calculated items | Active power value (P), fundamental wave active power (Pfnd), and motor power (F (Motor analysis and D/A-equipped models only) for each channel and connection | |
|--|--|--|
| Number of calculations that can be performed | Four each for efficiency and loss | |
| Formula | $ \begin{array}{l} \mbox{Calculated items are specified for Pin(n) and Pout(n) in the following format:} \\ \mbox{Pin = Pin1 + Pin2 + Pin3 + Pin4, Pout = Pout1 + Pout2 + Pout3 + Pout4} \\ \mbox{IPout1} \\ \mbox{IPin1} \\ \mbox{Loss = IPinI-IPout1} \\ \end{array} $ | |
| | | |
| 5) Power formula | | |
| 5) Power formula Functions | | |
| | selection | |

(6) Delta conversion

| Functions | Δ-Υ | When using a 3P3W3M or 3V3A connection, converts the line voltage |
|-----------|-------------|---|
| | Y-Δ | waveform to a phase voltage waveform using a virtual neutral point. When using a 3P4W connection, converts the phase voltage waveform to a line voltage waveform. |
| | | MS values and all voltage parameters, including harmonics, are calculated ost-conversion voltage. |
| | using the p | ost-conversion voltage. |

(7) Current sensor phase shift calculation

| Functions | Corrects the current se | nsor's harmonic phase characteristics using calculations. |
|------------------------------|---|---|
| Correction value settings | Correction points are set using the frequency and phase difference. | |
| | | 0.1 kHz to 999.9 kHz (in 0.1 kHz steps) 0.0 deg. to ±90.0 deg. (in 0.1 deg. steps) |
| | However, the time diffe to a maximum value of | prence calculated from the frequency's phase difference is subject 50 $\mu s.$ |

Display functionality

Functions Displays a connection diagram and voltage and current vectors based on the selected measurement lines. The ranges for a correct connection are displayed on the vector display so that the connection can be checked. Mode at startup User can select to display the connection confirmation screen at startup (startup screen setting)

| | setting). |
|-----------------|--|
| Simple settings | Commercial power supply / Commercial power supply high-resolution HD / DC / DC high- resolution HD / PWM / High-frequency / Other |
| | |

(2) Vector display screen

| Functions | Displays a connection-specific vector graph along with associated level values and phase |
|-----------|--|
| | angles. |

(3) Numerical display screen

| Functions | Displays power channels. | er measured values and motor measured values for up to six instrument |
|------------------|--|---|
| Display patterns | Basic by connection Selection display | Displays measured values for the measurement lines and motors combined in the connection. There are four measurement line patterms: U, I, P, and Integ. Creates a numerical display for the measurement parameters that the user has selected from all basic measurement parameters in the location selected by the user. There are 4-, 8-, 16-, and 32-display patterns. |

(4) Harmonic display screen

| ., . | • |
|------------------|---|
| Functions | Displays harmonic measured values on the instrument's screen. |
| Display patterns | Display bar graph: Displays harmonic measurement parameters for user-specified channels as a bar graph. Display list: Displays numerical values for user-specified parameters and user-specified channels. |

(5) Waveform display screen

| Functions | Displays the voltage and current waveforms and motor waveform. |
|------------------|--|
| Display patterns | All-waveform display, waveform + numerical display |

Automatic save function

| Functions | Saves the specified measured values in effect for each interval. | |
|---------------------------------|--|--|
| Save destination | OFF / Internal memory / USB flash drive | |
| Saved parameters | User-selected from all measured values, including harmonic measured values | |
| Maximum amount of saved data | Internal memory 64 MB (data for approx. 1800 measurements) USB flash drive Approx. 100 MB per file (automatically segmented) × 20 files | |
| Data format | CSV file format | |

Manual save function (1) Measurement data

| Functions | The [SAVE] key saves specified measured values at the time it is pressed. Comment text can be entered for each saved data point, up to a maximum of 20 alphanumeric characters. *The manual save function for measurement data cannot be used while automatic save is in progress. |
|------------------|--|
| Save destination | USB flash drive |
| Saved parameters | User-selected from all measured values, including harmonic measured values |
| Data format | CSV file format |

(2) Waveform data

| () | |
|------------------|--|
| Functions | A button on the touch screen saves waveform data at the time it is pressed. Comment text can be entered for each saved data point, up to a maximum of 40 alphanumeric characters. "The manual save function for measurement data cannot be used while automatic saving is in progress. |
| Save destination | USB flash drive |
| Data format | CSV file format |
| | |

(3) Screenshots

| (3) Screenshots | |
|---------------------------|--|
| Functions | The [COPY] key saves a screenshot to the save destination. "This function can be used at an interval of 1 sec or more while automatic saving is in progress. |
| Save destination | USB flash drive |
| Comment entry Data format | OFF / Text / Handwritten When set to [Text], up to 40 alphanumeric characters When set to [Handwritten], hand-drawn images are pasted to the screen. Compressed BMP |
| (4) Settings data | |
| Functions | Saves settings information to the save destination as a settings file via functionality provided on the File screen. In addition, previously saved settings files can be loaded and their settings restored on the File screen. However, language and communications settings are not saved. |
| | |

USB flash drive Save destination

Two-instrument synchronization function

| Functions | Sends data from the connected slave instrument to the master instrument, which performs calculations and displays the results. In numerical synchronization mode, the master instrument operates as a power meter with up to 12 channels. In waveform synchronization mode, the master instrument operates while synchronizing up to three channels from the slave instrument at the waveform level. | | |
|-----------------------|---|--|--|
| Operating mode | OFF / Numerical synchronization / Waveform synchronization Numerical synchronization cannot be selected when the data update rate is 10 ms. For both master instruments and slave instruments, waveform synchronization operates only when there are 3 or more channels. | | |
| Synchronized items | Numerical synchronization mode Waveform synchronization mode | Data update timing, start/stop/data reset Voltage/current sampling timing | |
| Synchronization delay | Numerical synchronization mode Waveform synchronization mode | Max. 20 µs Up to 5 samples | |
| Transfer items | Numerical synchronization mode | Basic measurement parameters for up to six channels (including motor data) | |
| | Waveform synchronization mode | Voltage/current sampling waveforms for up to three channels (not including motor data). However, the maximum number of channels is limited to a total of six, including the master instrument's channels. | |

Other functions

| Clock function | Auto-calendar, automatic leap year detection, 24-hour clock | |
|--------------------------|--|--|
| Actual time accuracy | When the instrument is on, ± 100 ppm; when the instrument is off, within ± 3 sec./day (25°C) | |
| Sensor identification | Current sensors connected to Probe1 are automatically detected. | |
| Zero-adjustment function | After the AC/DC current sensor's DEMAG signal is sent, zero-correction of the voltage and current input offsets is performed. | |
| Touch screen correction | Position calibration is performed for the touch screen. | |
| Key lock | While the key lock is engaged, the key lock icon is displayed on the screen. | |

General Specifications

| Operating environment | Indoors at an elevation of up to 2000 m in a Pollution Level 2 environment | | |
|--|--|--|--|
| Storage temperature and humidity | -10°C to 50°C, 80% RH or less (no condensation) | | |
| Operating temperature and humidity | 0°C to 40°C, 80% RH or less (no condensation) | | |
| Dielectric strength | 50 Hz/60 Hz 5.4 K/ms AC for 1 min. (sensed current of 1 mA) Between voltage input terminals and instrument enclosure, and between current sensor input terminals and interfaces 1 k/rms AC for 1 min. (sensed current of 3 mA) Between motor input terminals (Ch. A, Ch. B, Ch. C, and Ch. D) and the instrument enclosure | | |
| Standards | Safety EN61010 EMC EN61326 Class A, EN61000-3-2, EN61000-3-3 | | |
| Rated supply voltage | 100 V AC to 240 V AC, 50 Hz/ 60 Hz | | |
| Maximum rated power | 200 VA | | |
| External dimensions | Approx. 430 (W) × 177 (H) × 450 (D) mm (excluding protruding parts) | | |
| Mass | Approx. 14 kg ±0.5 kg (PW6001-16) | | |
| Backup battery life | Approx. 10 years (reference value at 23°C) (lithium battery that stores time and setting conditions) | | |
| Product warranty period | 1 year | | |
| Guaranteed accuracy period | 6 months (1-year accuracy = 6-month accuracy × 1.5) | | |
| Post-adjustment accuracy guaranteed period | 6 months | | |
| Accuracy guarantee conditions | Accuracy guarantee temperature and humidity range: 23°C ±3°C, 80% RH or less Warm-up time: 30 min. or more | | |
| Accessories | Instruction manual x 1, power cord x 1, D-sub 25-pin connector x 1 (PW6001-1x only) | | |

Conversion cables

CONVERSION CABLE CT9900 is required to connect the following current sensors to the high accuracy sensor terminal.

For use with CT6862, CT6863, 9709, CT6865, CT6841, CT6843 When using a sensor without "-05" in the model name, Conversion Cable CT9900 must be used to make the connection.

Broadband probe (connected to input terminal Probe 2)

| Model | CLAMP ON PROBE 3273-50 | CLAMP ON PROBE 3274 | CLAMP ON PROBE 3275 | CLAMP ON PROBE 3276 |

Sensor switching method

High accuracy sensor terminal: Slide the cover to the left.

When connecting CT6862-05, CT6863-05, 9709-05, CT6865-05, CT6841-05 or CT6843-05

Wideband probe terminal: Slide the cover to the right.

When connecting 3273-50, 3274, 3275, 3276, CT6700 or CT6701

Configurations

Model Order Code Number of built-in channels Motor analysis & D/A output

| Wodel | | Number of built in charmers | Wotor analysis a Dirtoutput | | |
|----------------------------|---|-----------------------------|-----------------------------|--|--|
| POWER ANALYZER | PW6001-01 | 1ch | — | | |
| | PW6001-02 | 2ch | _ | | |
| | PW6001-03 | 3ch | — | | |
| | PW6001-04 | 4ch | — | | |
| | PW6001-05 | 5ch | — | | |
| | PW6001-06 | 6ch | — | | |
| | PW6001-11 | 1ch | 1 | | |
| | PW6001-12 | 2ch | 1 | | |
| | PW6001-13 | 3ch | 1 | | |
| | PW6001-14 | 4ch | 1 | | |
| | PW6001-15 | 5ch | 1 | | |
| | PW6001-16 | 6ch | 1 | | |
| Accessories: Instruction n | Accessories: Instruction manual × 1, power cord × 1, D-sub 25-pin connector (PW6001-11 to -16 only) × 1 | | | | |

- The optional voltage cord and current sensor are required for taking measurements.

- Specify the number of built-in channels and inclusion of Motor analysis & D/A output upon order for factory

installation. These options cannot be changed or added at a later date.

Current measurement options

| Model | | Rated primary current |
|----------------------|-----------|-----------------------|
| AC/DC CURRENT SENSOR | CT6862-05 | 50A |
| AC/DC CURRENT SENSOR | CT6863-05 | 200A |
| AC/DC CURRENT SENSOR | 9709-05 | 500A |
| AC/DC CURRENT SENSOR | CT6865-05 | 1000A |
| AC/DC CURRENT PROBE | CT6841-05 | 20A |
| AC/DC CURRENT PROBE | CT6843-05 | 200A |
| CLAMP ON PROBE | 3273-50 | 30A |
| CLAMP ON PROBE | 3274 | 150A |
| CLAMP ON PROBE | 3275 | 500A |
| CLAMP ON PROBE | 3276 | 30A |
| CURRENT PROBE | CT6700 | 5A |
| CURRENT PROBE | CT6701 | 5A |

CONVERSION CABLE CT9900

For use with CT6862, CT6863, 9709, CT6865, CT6841, CT6843 When using a sensor without "-05" in the model name, Conversion Cable CT9900 must be used to make the connection.
